KHRONOS[®] GROUP

The diagram is a circle divided into six segments, each representing a different category of graphics applications. The outer ring of the circle labels these categories, while the inner ring provides more specific details about the target environment or use case. In the center of each segment are logos for various graphics APIs that are commonly used in that category.

Category	Target Environment / Use Case	APIs
Performance 3D	Interactive 3D and Compute on Desktop and Mobile	Vulkan, OpenGL ES, OpenCL, SPIR, Vulkan SC
XR	Virtual and Augmented Reality	OVR, OpenXR, WebGL, Vulkan
Pervasive 3D	Tooling and Widespread Usage of 3D	WebGL, KTX, 3D Commerce, GLTF
Performance Compute	Parallel Computing and Visualization on HPC and Desktop	OpenCL, SYCL, ANARI, SPIR
Embedded Compute	Vision Interfacing and Mobile	Vulkan, OpenCL, SYCL, SPIR, OpenVX, NNEF
Embedded 3D	Safety Critical 3D and Compute	SPIR, OpenCL SC, Vulkan SC

Khronos Ecosystem Segmentation

3D content is already **pervasive** in retail. Virtual representations of products are everywhere from ads, web on mobile & computer, Augmented Reality, Virtual Reality to Mixed Reality devices.

Importance of standardisation:

- **Physical to Digital Consistency**
 - Getting as close to the real thing as possible **increases e-commerce conversion, online duration** for consumers & **reduces returns** of physical products, **increasing brand trust**.

Importance of standardisation:

- **Physical to Digital Consistency**
 - Getting as close to the real thing as possible **increases e-commerce conversion**, **online duration** for consumers & **reduces returns** of physical products, **increasing brand trust**.
- **Load time**
 - **Processing & bandwidth** can be varied therefore the lower the loading time the better. **glTF** stores 3D model information in JSON format. The use of **JSON** **minimizes** both the **size** of 3D assets and the **runtime processing** needed to unpack and use those assets

Scene Interactivity

Gerald Guyomard, Adobe

Adding Interactivity to glTF

★ Interactivity brings your 3D Content to life:

- content dynamically reacts to user inputs
- A typical use case : Product Configurators

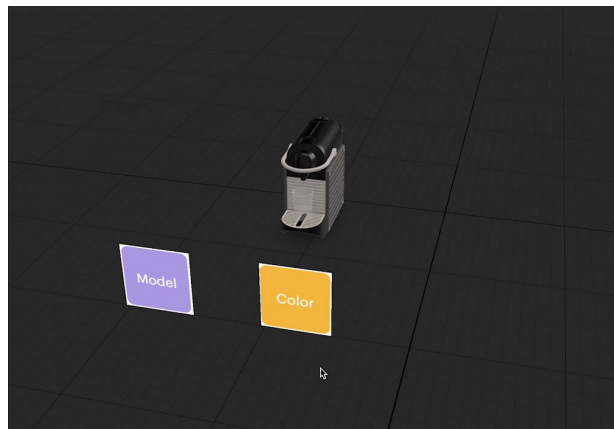

Adding Interactivity to glTF

glTF can embed static scenes made of multiple sorts of assets (meshes, textures, animations, sounds...)
but there is no internal rules to define how the runtime should handle them

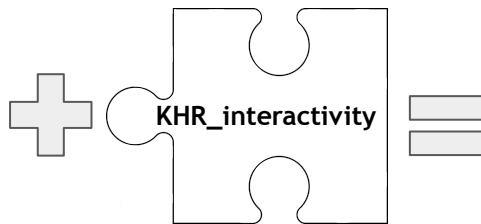

Until now interactivity has been external to glTF, hence hardcoded into the application

Interactive content is not portable to other applications

Adding Interactivity to glTF

glTF TODAY

Interactive glTF

This new glTF extension:

- Provides blueprint for implementation of Interactive Assets (static geometry + behaviors)
- Empowers development of simple interactive applications (Games, Education, Design Review, e-commerce...)

General Strategies for building Interactivity

• Write code

- Compiled Language : C, C++, Swift...
- Interpreted Language : Javascript, Lua, Python...
- It requires some programming skills
- Portability Issues

```
#include "GameEngine.h"

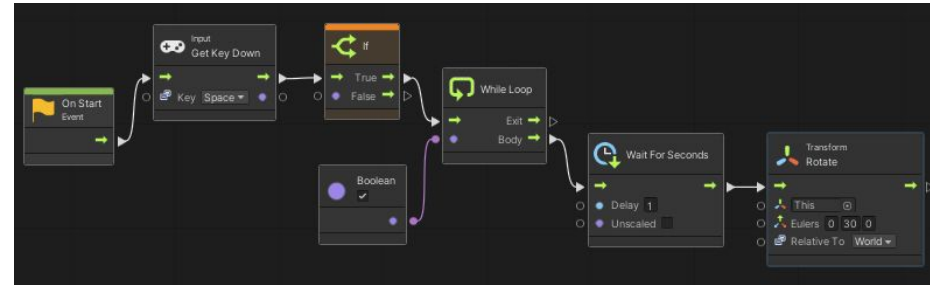

class MyGame {
private:
    Object* _object;

public:
    void onKeyPressed(char key) override {
        if (key == ' ') {
            while (true) /*pseudo code...*/{
                ::sleep(1);
                _object->rotateBy(30.f);
            }
        }
    }
};
```

C++

• Visual Scripting

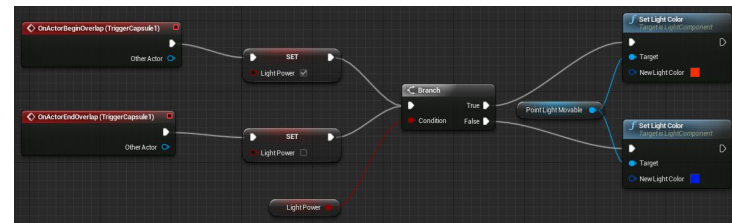

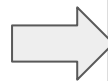

- Creator assembles and connects building blocks
- Much easier to learn for non engineers (no syntax to learn, no compilation necessary)
- More portable (lightweight runtime, no sandboxed VM to rely on)
- Limited set of blocks makes it more secure

Unity Visual Scripting

Visual Scripting: Node Based Graph

- Comprehensive feature set (get/set variables or world state, branching flow, logic)
- Implemented by Unity (Visual Scripting), Unreal (Blueprints), Nvidia Omniverse (Action Graph), ...

Example Implementation: Unreal Editor

★ **KHR_interactivity provides specifications for Node Based Graphs:**

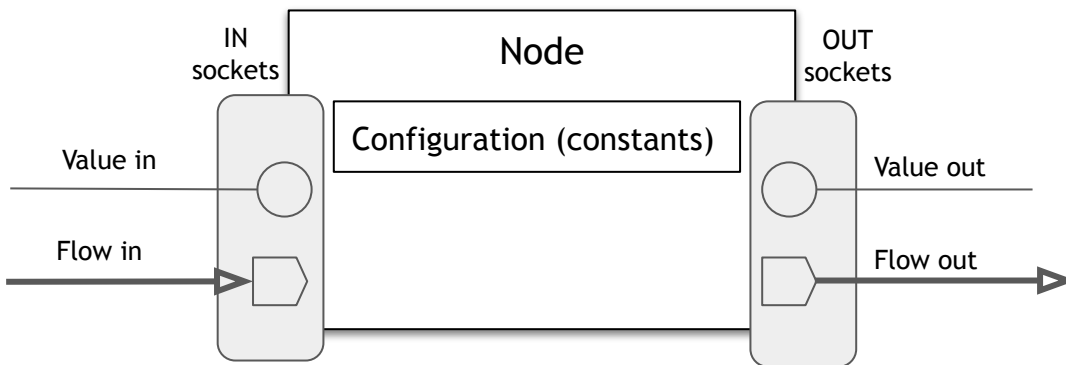

- Accessible and powerful
- Extensible with future extensions
- Compatible with visual editing, but visual editors are not required

KHR_interactivity Principles

An interactivity Graph is a set of connected Nodes forming a Directed Acyclic Graph (no cycles)

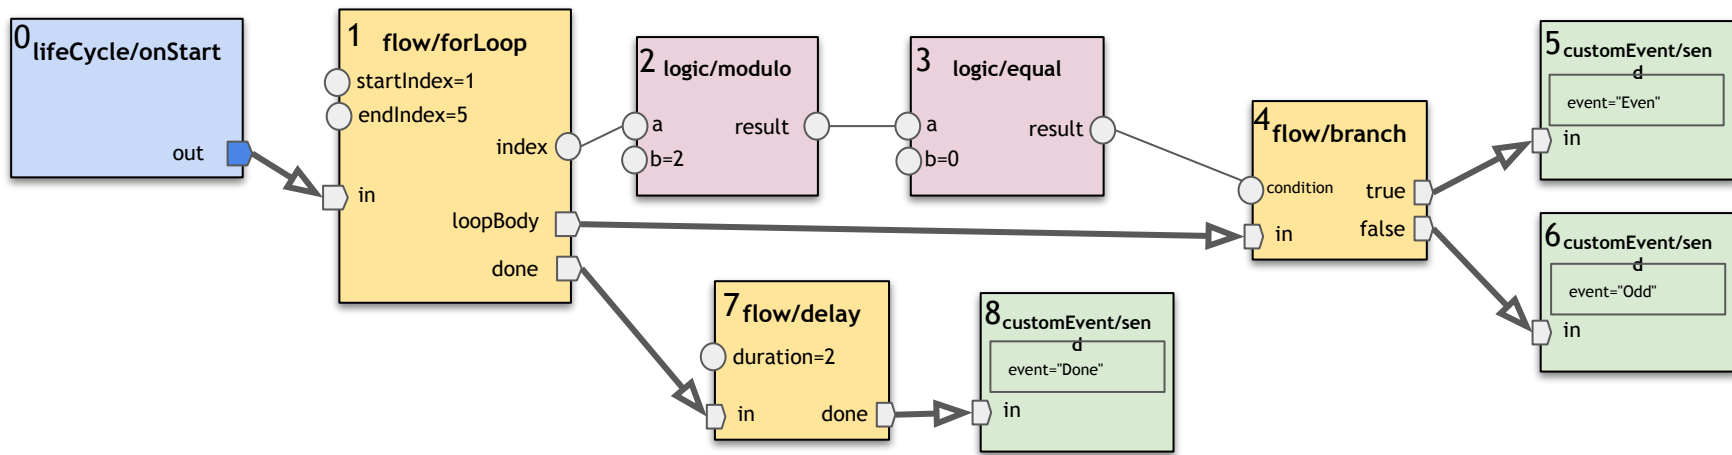

Node characteristics :

- type defining the action (add numbers, listen to an event, branch on a condition...)
- an immutable configuration
- some input sockets (value and flow)
- some output sockets (value and flow)

Example of a glTF Interactivity Graph

- Enumerates a sequence of integers 1, 2, 3, 4, 5
- Sends custom events "odd" or "even" for every number (eg $(value \% 2) == 0$?)
- Once done, after 2 seconds, sends custom event "Done"

- Various categories of Node:

lifeCycle/...	onStart, onTick...
flow/...	forLoop, delay, branch, while...
logic/...	modulo, equal, add, subtract...
customEvent/	send, receive

...

Accessing the Scene Graph from the Behavior Graph

- High level actions change runtime scene state by starting / stopping animations, sounds, etc.
- Direct access to set / get runtime scene state using JSON paths
 - Set *"/nodes/6/translation"*
 - Set *"/nodes/3/scale"*

Extends the proposed *KHR_animation_pointer*'s JSON paths for interactivity

What can't you do, and why?

Considerations: Security, Portability, Ease of Implementation

Limitations:

- No dynamic allocation (no object instantiation, no array variables, no dynamic strings)
- No network access
- No file system access
- No multi user

Scene Composition

Leonard Daly, Daly Realism

Origination of Idea

- Adobe came to 3D Formats with a description of Composition & Interactivity at the same time as 3D Commerce was beginning to formulate use cases for the same
- Separate development with knowledge of the others work
- Combined efforts this spring with 3D Commerce taking the lead on Composition and 3D Formats for Interactivity

Types of Composition

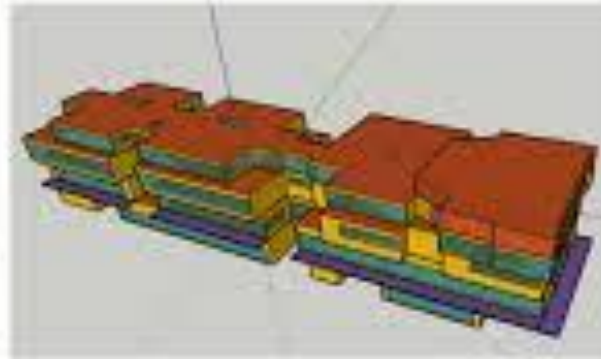

- **Level of detail**
 - Distance based [traditional]
 - Time based [items that do not need to be visible throughout experience]
 - Environment based
- **Streaming [large model progressive loading]**
- **Smart Loading [based on user device & network]**
- **Change (add/delete) objects in scene**

LOD - Geospatial

Tree arrangement of data to support scene detail at varying distance and allow ease of navigation while streaming important data

LOD: Building Information Modeling

Work to Date

- Work done in May 2023 as Prototype
- Basic test of [current specification](#)
- Note name change to “glTF Composition”
- Video of Demo

Plans and Next Steps

- **Specification development**
 - Interactivity - already described & in progress
 - Composition - work just starting
 - All in public GitHub
- **Prototype development**
 - Use case & Specification development by 3D Commerce
 - Technical development by 3D Formats
 - Prototype development by UX3D by extending Sample Viewer

Discussion and Futures

Leonard Daly, Daly Realism
Dan Frith, Avataar
Gerald Guyomard, Adobe

Guidelines, Tips and Tricks

- **Layouts**

- Every slide should use one of the eight available layouts (see layout button)
- Click Reset early and often to make sure you are using the layout!
- Don't delete slides in this template until you have used all the layouts you need
 - PowerPoint RANDOMLY deletes unused layouts (use two indents sparingly)

- **Text**

- Use Trebuchet font for ALL text
- Don't insert empty lines within layout text boxes

- **Graphics**

- Do not use shading or shadows on graphics
- Try to connect your lines to boxes to make editing easier

- **Animations and Transitions**

- Don't forget to check them before presenting! Don't use transitions on Zoom

- **Don't create boring slides with just text (like this one!)**

- Use more pictures and less text to get your message across

**Use this blank layout when your slide content is self explanatory
and you don't need a title**

This is the default standalone text box style

**Add a background and/or outline using 'Format Shape'
Automatically fit the text to the outline box using Autofit
If a box with no text mysteriously won't change size - turn off Autofit!**

Alternative to Right-aligned Bullets

Brief overview of Khronos compute acceleration standards

And why they might be of interest to the RISC-V Community

Deeper dive into OpenCL

Including roadmap developments

Discussion on how Khronos and RISC-V could collaborate

Khronos is open to any organization - please get directly involved if you wish!

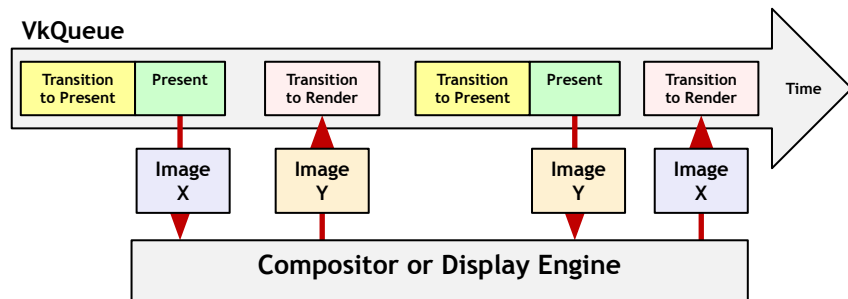

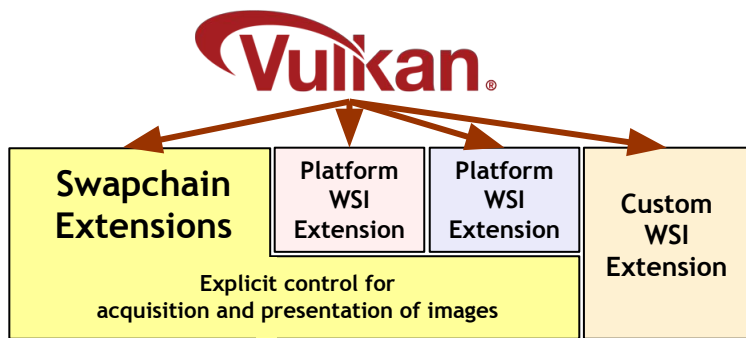

We welcome feedback and cooperation between organizations

These slides will be available online

www.khronos.org

Smaller Font Bullets Make Space for Graphics

- **Explicit control for acquisition and presentation of images**
 - Designed to fit the Vulkan API and today's compositing window systems
 - Cleanly separates device creation from window system
- **Platform provides an array of persistent presentable images = Vulkan Swapchain**
 - Device exposes which queues support presentation
 - Application explicitly controls which image to render and present
- **Standardized extensions - unified API for multiple window systems**
 - Works across Android, Mir, Windows (Vista and up), Wayland and X (with DRI3)
 - Platforms can extend functionality, define custom WSI stack, or have no display at all

Medium Bullets

- Broad commercial uptake of OpenCL
 - Imaging, video, vision, simulation
 - Adobe, Apple, SONY, Corel, ArcSoft
 - Dassault, Houdini, Mathematica, MAYA...
- “OpenCL” on Sourceforge, Github, Google Code, Bitbucket finds over 2,000 projects
 - OpenCL implementations - Beignet, pocl
 - VLC, X264, FFMPEG, Handbrake
 - GIMP, ImageMagick, IrfanView
 - Hadoop, Memcached
 - WinZip, Crypto++ Etc. Etc.
- Desktop benchmarks use OpenCL
 - PCMark 8 - video chat and edit
 - Basemark CL, CompuBench Desktop

Final Cut Pro X

AUTODESK® MAYA®

Short Bullets

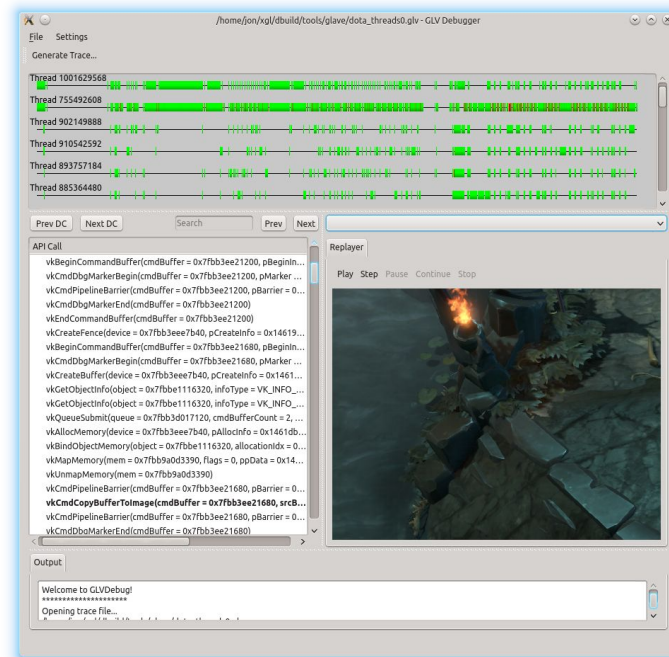

- To accompany larger graphics

Dual Column Bullets

- Extensible modular architecture encourages many fine-grained layers - new layers can be added easily
- Khronos encouraging open community of tools e.g. shader debugging
- Valve, LunarG, Codeplay and others are already driving the development of open source Vulkan tools
- Customized interactive debugging and validation layers will be available together with first drivers

- Prototype Vulkan Debugger from Valve and LunarG
- [LunarG.com/Vulkan](https://lunarg.com/Vulkan)

Typical Diagram Using Title Only Layout
